

Unmatched UV LED Spot-Curing Flexibility

With a broad selection of standard and custom LED wavelengths, the **OmniCure® LX500 UV LED Spot Curing System** offers unparalleled control to provide a consistent, repeatable, and efficient curing process.

- **Smart:** Intelli-Lamp® technology tracks and adjusts LED performance for a stable optical output over LED lifetime.
- **Precise:** Calibration for absolute irradiance/ optical power output*, and precisely controlled UV dose delivery with StepCure®.
- **Efficient:** Next generation V3 LED heads provide high peak irradiance, even radiation distribution, lower energy consumption and longer service life.
- **Versatile:** Supports up to 4 individually controllable LED heads, a wide selection of standard accessories and customization options.

**Requires optional calibration kit. Power calibration for standard wavelengths only.*
